illustrate only some embodiments of the invention and are therefore not to be considered limiting of its scope, because the invention may admit to other equally effective embodiments.

5 [0052] Figure 1 is a functional block diagram of a system comprising a diluent source and a plurality of concentrate sources, each being in fluid communication with a common mixing chamber; and

[0053] Figure 2 is a functional block diagram of a system comprising a diluent source and a plurality of concentrate sources, each being in fluid communication with a plurality of mixing chambers.

DETAILED DESCRIPTION OF THE INVENTION

[0054] Referring to Figure 1, a machine 1a comprises a diluent source 1, for example water, and a plurality of concentrate sources 2 to 5. Said diluent and concentrate sources are in fluid communication with a mixing chamber 6 through a series of conduits 7 to 11, respectively controlled by control valves 12 to 16. Said control valves 12 to 16 may be automatically or manually operated. Said mixing chamber 6 in fluid communication with a dispense point 17, which is controlled by a control valve 18, said dispense point 17 serving to dispense product to a storage container 19, which may be an integral component of the machine, or in an alternative embodiment, may be external to
